

## ABSTRACT OF THE DISCLOSURE

A coil of tapered configuration fitted to the penis of a male human, said coil made from a malleable spring-like metal and coated with a substance which may be continually sanitized without adversely affecting said coil's physical properties. When placed on the penis said coil acts to establish and maintain engorgement of the penis with blood and provides a pumping action along the length of the penis which not only establishes, but maintains engorgement. The invention stimulates the penis enhancing feeling, stiffness, and also stimulates the contacting genitals of the female sexual partner.
